

## Google Workspace - A secured place for innovative collaboration

The company was looking for a secured & innovative approach for communication and collaboration among the business users. HCINPL chose Webveer Automation and Service Pvt Ltd as the implementation partner for implementing Google Workspace.

### The challenge

The legacy system for communication was posing lots of problems like delay in the mail receipts, challenges in remote meetings among the scattered business teams, real time editing and sharing of the documents, and effective data storage in a centralized platform. Without these the user community was stranded without access to the business documents and unable to collaborate efficiently.

### The solution

Webveer migrated HCINPL users profiles in a well planned and phased manner to the Google Workspace ensuring no downtime. The phases were implemented with a robustly designed Change Management program. Real-time scenarios were tested to ensure that the organization's objectives are met. The users were trained in the various Google Workspace products to overcome the day to day challenges.

### The results

The credibility of HCINPL increased with the adoption of Google Workspace's domain-branded email. Google Vault solved the long term data storage issue. Productivity tools such as Google Docs, Sheet, Slides and Google Meet have helped teams to collaborate in real-time with 24/7 accessibility, boosting the team's overall productivity with seamless interoperability in a very secured environment.

“ HCINPL found it easier to communicate and work more efficiently as a team in a more secured environment. Google Workspace products had a tremendous positive impact in our collaboration and communication processes making them more seamless, easy and flexible. Google Docs, Sheets, Slides and Google Meet have helped us reducing significant time in our decision making process. ”

Vivek Patil, Sr. Network Engineer, HCIN Network Private Limited
